Africa

Updated Status: Issued

project name - members only

Last Updated: 14 December, 2010

Example Only

This project has been in development for the last 12 months and we are now looking for an investor to come on board and help us commercialise it. Strategic investors preferred with previous experience in methane capture who are also interested in developing other projects in the future. In terms of our technology it is proven and patented. As a secondary and or linked opportunity we would also consider 'forward selling' the first two years of carbon credits. Please contact us if you would like more information.
